PROJECTS

Heart Disease Risk Assessment System | [Github Link](#)

Jan 2026 – Feb 2026

- Developed end-to-end ML pipeline on ~**320K healthcare records**; addressed class imbalance and optimized **Recall (0.82)** and **ROC-AUC (0.85)** through model comparison and decision threshold tuning.
- Deployed a **Flask REST API** for real-time prediction with a consistent preprocessing pipeline.

Resume-JD Match Scorer | [Github Link](#)

May 2026 – June 2026

- Built a pure NLP tool (no LLMs) scoring resume-JD alignment using **TF-IDF vectorization** and **cosine similarity** via **scikit-learn**.
- Extracts and compares **100+ categorized tech skills** using **n-gram matching** and surfaces missing keywords with improvement suggestions via a **Flask REST API**.

AI-Based Predictive Maintenance System | [Github Link](#)

Aug 2026 – Present

- Developed an end-to-end AI-powered predictive maintenance platform integrating **IoT sensors**, **MQTT** communication, **FastAPI** backend, real time data storage and an interactive monitoring dashboard for continuous machine health monitoring.
- Built an **unsupervised machine learning pipeline** with feature extraction (**RMS**, **Kurtosis**, **Crest Factor**, **FFT**) from vibration, temperature, and current sensor data, enabling early fault detection and real-time health assessment.
